Accessories

To compliment our parasols we offer a complete range of bases, security devices and other options.

All bases are matched to the size of the parasol to provide a perfect fit for the pole and a perfect weight to ensure that the parasols stay upright.

Metal Bases

Flat steel plates powder coated in a high quality finish for exceptional durability. Supplied with adjustable nylon feet, to level the base on an uneven surface. Available weights: 20, 40 and 60Kg with tubes to fit any of our parasols.

Underground Bases

Designed to be permanently installed, manufactured from stainless steel these are the ultimate parasol fixing. When not in use the top tube can be removed and the lid closed to leave a flat surface suitable for walking or driving over. The top tube easily locks into the ground tube to provide a secure base for parasols. Available sizes 38, 48, 58 or 70mm.

These underground bases are perfect for commercial use where standard bases can cause a trip hazard for staff and customers.

Concrete Bases

Cost effective alternative to the metal bases. Reinforced concrete bases, supplied with a powder coated steel base plate, to fit our parasols exactly. Available weights: 25, 45, 65 and 110Kg.

All models, except the 25Kg base are fitted with stainless steel handles to make them easier to move.

Security Options

We also offer a range of security devices designed to deter the opportunistic thief.

Cover Bags

A range of cover bags is available, matched to the size of the parasol, to provide effective protection when not in use.
